

FT "Free Turn"  
Patent 6,991,216

### Close Hook-Up "CH" Style LG

- Close Hook-up design insures the longest possible glass length for a given vessel C-C
- LG chamber elongated to accomodate lateral ports
- Gage valves can be set closer together than a standard end connected gage, within 3/8" of the visible glass dimension, see Table
- Permits use of spherical unions

**Irregularities** in parallelism of upper & lower vessel nozzles can cause the vessel unions to be out of square. The two point attachment of a typical sight glass requires simultaneous squareness when making up the unions - otherwise leak at the union or excessive strain of the connector and the "connecting nipples" will result

### Spherical Union Advantages:

- Minimize piping strain
- Minimize leak at union
- 1.7x stronger in bending than regular Flat Floating Union vessel connector.... more suitable for long and heavy gages

Angular misalignment often seen on horizontal vessels and field constructed piping

Corrected with use of spherical unions - as shown

Sheet: 1/4

Example 1: R100-19 CH (21#) ... use 1/2 NPS connecting nipples

Case A, Typical arrangement: mounted on 14" vessel centers ...  
 $D = (14 - 12.625 \text{ vis. glass}) / 2 = .687"$

Case B, Factory minimum - Catalog standard: design vessel nozzles at 12.625" C-C, to match the visible glass length ...  
 $D = 0$

Example 2: R100-89 CH (163#) ... use 3/4 NPS connecting nipples

Case A, Typical arrangement: mounted on 114" vessel centers ...  
 $D = (114 - 111.5 \text{ vis. glass}) / 2 = 1.25"$

Case B, Factory minimum - Catalog standard: design vessel nozzles at 111.875" C-C (111.5 + .375), to "match" the visible glass length ...  
 $D = .187"$

Table I

Gage Port NPS	Minimum Vessel C-C Equals	D = distance from lower glass view to lower vessel C/L	Min. D	Min. Gage Port C-C	E = distance from lower glass view to lower gage port	F
1/2	Visible Glass	(Vessel C-C minus Visible Glass / 2)...or specify asymmetry if required	0	Visible Glass + 1.5"	Min. .75"	1.5"
3/4	Visible Glass + .375"		.187"	Visible Glass + 1.875"	Min. 1.062"	2"

Sheet: 2/4

# Choice of Vessel Union Connector

3/8" inside diameter flow path

## FLAT / FLOATING UNION

Linear Adjustment

Permits up to 1/4" on vessel centers (pair)

## SPHERICAL UNION

Angular Adjustment

Larger section modulus "Z" than FLAT floating union connector, 1.7x stronger in bending

Recommended for angular misalignment due to non-jig set construction, vibration service, & long / heavy gages

**Soft Seal: Static O'ring**  
Standard feature

Union Nut omitted for clarity

**Primary Seal: Metal to Metal**  
O'ring not required

# Center to Center Adjustment using Spherical Unions

Vessel connectors remain parallel after rotation

If required, use a soft hammer to "bump" the spherical union vessel connector into "rotated" position.

Note: the horizontal connecting axis between LG and GV permits use of spherical union, which will overcome both angular AND vessel C-C misalignment at the same time.

## Gage Port Options

Design vessel C-C distance using Table 1... where  
 Vessel C-C = Visible Glass (1/2 NPS), or  
 Vessel C-C = Visible Glass + .375" (3/4 NPS)

Factory customized to match  
 vessel centers
